

## Beech

European Beech carries the Latin name *Fagus sylvatica*. The colour varies from pink to white/cream after steaming. Like Ash, Beech dries quickly.

Beech has been called the ‘*mother of the forest*’ as without it in mixed broad-leaved forests, other hardwood timber trees have greater difficulties of survival.

Common uses for European Beech are flooring and interior joinery (furniture).

Legally certified material available.

Beech	
Durability	Not durable
Strength	Strong and very resistant to bending
Density	720
Colour	Pale cream, sometimes with a pink or brown hue
Grain	Straight
Texture	Fine to medium
Drying	Fairly quick
Machining	Very well
Screwing / Nailing	Pre-drilling recommended
Botanical Name	Fagus Sylvatica
Origin	European
