

## Kempas

Kempas *Koompassia Malaccensis* is a species sourced from Malaysia and Indonesia.

Orangish-brown in colour with a well-defined pale yellow sapwood. The texture is medium to coarse with an interlocked grain.

Kempas is a fairly difficult timber to work due to its density and interlocked grain. Also, the timber can contain stone like minerals in streaks of brittle tissue.

Common uses for Kempas are constructional use, flooring, stables and plywood.

Kempas / Menggeris	
Durability	Durable
Strength	D60
Density	880kg / m <sup>3</sup>
Colour	Red brown
Grain	Straight or interlocked
Texture	Coarse
Drying	Slow
Machining	Well but coarse
Screwing / Nailing	Pre-boring required
Botanical Name	Koompassia Malaccensis
Origin	Malaysia & Indonesia

Available Sizes
34mm x 144mm Tongue & Groove Profile
