

Lime Logs

European Lime (linden) has no distinction by colour between sapwood and heartwood, the wood being pale yellowish-white when freshly cut. It has a quick drying process and takes nails, stain and polish very nicely, turns well, and carves extremely well.

The average height of the tree is 30m but can reach 40m with a diameter of 1.2m.

The most common use for European Lime is for interior joinery (furniture).

Legally certified material available.

Lime Logs	
Durability	Not durable
Strength	Reasonably strong
Density	560
Colour	Pale yellow/white
Grain	Straight and even
Texture	Fine
Drying	Fairly quick
Machining	Very well
Screwing / Nailing	Pre-drilling recommended
Botanical Name	Tilia
Origin	European
