

## Mahogany Logs

African Mahogany originates from West Africa, from the Ivory Coast to Gabon. It is part of the Khaya species. African Mahogany grows to a height of 30m with lengths of 25m.

The drying process is fairly quick, and African Mahogany has good nailing and screwing properties which will finish nicely to a high polish.

The main uses for African Mahogany are exterior joinery (boats) and interior joinery (furniture)

Mahogany Logs	
Durability	Moderately durable
Strength	Moderately strong
Density	530+/-20%
Colour	Reddish brown
Grain	Straight but with interlocking grain
Texture	Medium
Drying	Fairly quick
Machining	Well
Screwing / Nailing	Pre-drilling required
Botanical Name	Khaya Anthotheca
Origin	Africa

Available Sizes (inches)
3" x 6"
3" x 8"
4" x 12"
