

Okan

Okan *Cylicodiscus gabunensis* is a species common to the African rain forests from Sierra Leone to Gabon.

The heartwood is dark brown in colour with a greenish tinge, sapwood defined by its pinkish colour. The grain interlocked and texture coarse. Okan can check and distort if dried too quickly.

Although a hard and heavy timber, Okan machines up well giving a satisfying finish.

Common uses for Okan are stables, marine construction, decking and heavy structural use.

Okan / Denya	
Durability	Very durable
Strength	D50
Density	960kg / m ³
Colour	Dark brown
Grain	Interlocked
Texture	Medium - coarse
Drying	Very slowly
Machining	Difficult
Screwing / Nailing	Pre-boring required
Botanical Name	<i>Cylicodiscus gabunensis</i>
Origin	West Africa

Available Sizes
2" x 6"
3" x 6"
4" x 8"
6" x 6"
8" x 8"
